

Integration Guide

DoneIn2Minutes designed for BlackBerry® Wireless Handheld

About

DoneIn2Minutes is a productivity application which has been designed to track your task processing. It works well with other applications like <u>NextAction!</u> Or <u>TaskMaster</u>.

You can track your task processing speed very easily.

Integration Ideas

The *Doneln2Minutes* idea is to find out whether or not your task processing speed fits into a specific time frame. So it makes sense to access the program while you are processing your tasks. No matter which task application you are using, when you start processing a task you should switch over to *Doneln2Minutes*, process it, and check if you made it within the time frame.

Integration Made Easy

The easiest and most efficient way to get access to DoneIn2Minutes at every time is to assign one of your BlackBerry® device's Convenience Keys to it.

Most current BlackBerry models come with at least one convenience key which is freely assignable to any application installed on a BlackBerry[®] Wireless Handheld. This key can be pressed at any time from within any application to start the application that has been assigned to this key before. E.g. by default, the convenience keys of a BlackBerry Curve are set to: Left Convenience Key \rightarrow Voice Dialing; Right Convenience Key \rightarrow Built-In Digital Camera.

To assign DoneIn2Minutes to a Convenience Key of your choice please proceed as followed:

- 1. Go to **Options** from within your Home Screen.
- 2. Go to Screen/Keyboard.
- 3. Select the Right or Left Convenience Key field.
- 4. Assign DoneIn2Minutes to the convenience key of your choice.
- 4. Press the Menu key.
- 5. Click Save and exit this screen.

An example of this setup screen is shown on the right side. A complete Howto on this topic can also be found <u>here</u>.
